Renewable Energy Stocks Showing Strength in 2012

NEW YORK, NY, Feb 22, 2012 (MARKETWIRE via COMTEX) -- Renewable energy stocks have been on fire of late. The PowerShares Wilderhill Clean Energy Portfolio (PBW) has surged more than 22 percent year to date - outperforming the Dow Jones Industrial Average by roughly 72 percent in 2012. The Paragon Report examines investing opportunities in the Alternative Energy Sector and provides equity research on SatCon Technology Corporation

....

According to a US energy sector report from EIC Consult, solar and wind power are leading the way in renewable energy. While there is a need for renewable technologies to become more competitive when compared with cheap gas, the report predicts that renewables will have an increasingly important role in the future US energy mix. EIC Consult's Country Overview report found that one of the key challenges for renewable development in the US is the need for technologies to become more cost-competitive when up against cheap gas.

The Paragon Report provides investors with an excellent first step in their due diligence by providing daily trading ideas, and consolidating the public information available on them. For more investment research on the Alternative Energy sector ...
