A Burst of Energy ETFs

Even as oil prices trend lower, U.S. consumers are still reeling as high gasoline prices and alternative energy setbacks continue to make headlines. Even as pullbacks in solar spending abroad have hurt the performance of the ... Solar ETF and the ... Solar Energy ETF in the short-term, recent price dips provides a good opportunity for buyers looking to the longer-term solar picture. The embattled ... fell 12% in the three-month period ended June 10, but it's one of the ETF industry's biggest gainers Monday, adding as much as 2% in morning trading. The PowerShares WilderHill Clean Energy ETF is also pushing higher in morning trading. It's important to look beyond today's session, however, when considering the best way to add well-balanced exposure to your energy portfolio. Whether you're looking to target a particular type of solar energy -- with funds like
