….
Invesco Global Clean Energy ETF (PBD**)** - Last Closing Price: $18.27

The clean energy sector is expected to see continued growth given that the power generation in the United States from new renewables (primarily wind and solar) is expected to reduce coal and natural gas-fired energy production through 2024 at least. Wind and solar alone are expected to account for 16% of total energy production in 2023.

Invesco Global Clean Energy ETF follows the WilderHill New Energy Global Innovation Index and offers exposure to companies engaged in the business of the advancement of cleaner energy and conservation. It holds 120 securities in its basket, with each accounting for no more than 1.4% share. American firms make up for the largest share at 31.1%, while China and Taiwan round off the next two spots. PBD has AUM of $193.6 million and charges 75 bps in annual fees. It trades in an average daily volume of 23,000 shares and is down 1.5% so far this year.
